

Alger le 06 Décembre 2015

Pr. Abdelouahab Mekhaldi (Senior Membre IEEE)

Directeur du Laboratoire de Recherche en Electrotechnique (LRE)

Responsable de Doctorat Option : Techniques de la Haute Tension

Ecole Nationale Polytechnique

Motivation Letter

Being affiliated to IEEE since 2004 (Senior Member), my first publication in the IEEE Transactions on Dielectrics and Electrical Insulation Review, was in 1999. I was always attracted by this big scientific association. Consequently, I always militated for her creation in Algeria. Moreover, I am the coordinator of the Algeria joint chapter of Nuclear and Plasma Sciences/Dielectrics and Electrical Insulation. I was, almost naturally, with many of my friends and fellow countrymen (and countrywomen) through all Algeria, one of the founders member of the association of Electrical Engineering, which becomes essential because of the creation of the IEEE section of Algeria. For all these reasons, I apply for the elections IEEE Algeria, for the President's post.

Most of my publications (approximately at least about fifty between conferences and publications) are in IEEE. I also collaborated in the organization of the IEEE Conference which took place in Tlemcen and whose all the accepted papers are in IEEE Xplore. I took this opportunity of my presence at this conference to make sensitive the researchers so that they subscribe to IEEE.
